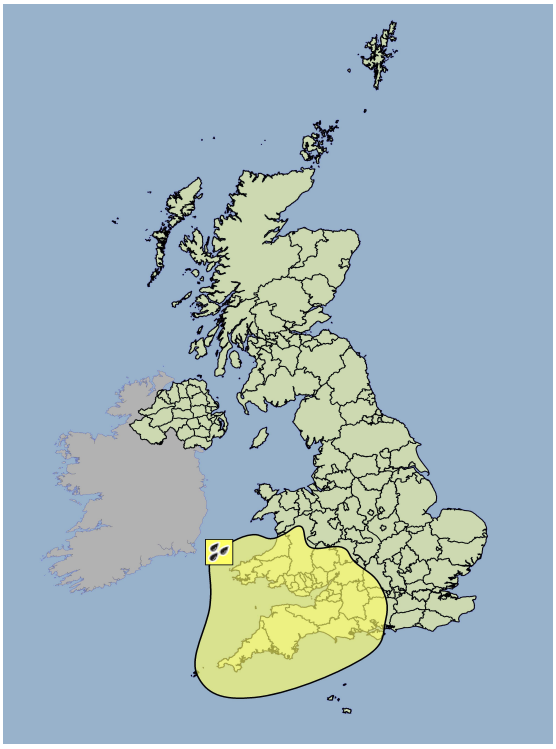
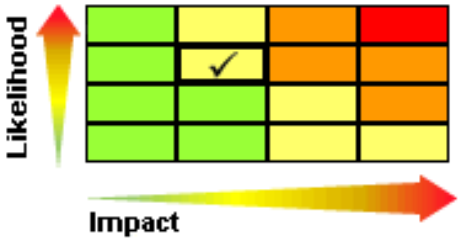
National Severe Weather Warning Service





Chief Forecasters Assessment
A developing frontal system is expected to push north, then east across many parts of the UK during Thursday and into Friday. Rain is expected to become persistent and heavy at times, particularly over south-facing hills. Many places may well see 20-30 mm during the day, with as much as 50-70 mm over higher ground. With this bout of heavy rain coming after what is expected to be a wet week, localised flooding is a possibility either from surface water or from some rivers.

There is still a large degree of uncertainty regarding the track and timing of this system, so this warning will be updated in the coming days to hone the areas most at risk from significant precipitation totals.

The Met Office have issued a **Yellow Alert** of **Rain**

Valid from **21:00 on Thu, 13th Nov 2014** until **18:00 on Fri, 14th Nov 2014**

A developing frontal system is expected to bring another period of persistent, and at times heavy, rain to parts of the UK later on Thursday and into Friday. Rain is likely to be accompanied by strong and gusty winds.

The public should be aware of the risk of localised flooding, this perhaps exacerbated by fallen leaves blocking drainage courses.
